## SKILLS

## EXPERIENCE

### FRONT END DEVELOPER @ MOBILITY QUOTIENT

May 2019 - Present

By being able to quickly learn new technologies, I became a member of the team that works for our multimillion-dollar clients right from the beginning. I also mastered various stacks as one project could be in pure vanilla JS, while the next one required a framework like Angular or React. Technologies that I specialized in: JavaScript, Angular, React, PHP, Twig, LESS, SASS, bootstrap, Symphony & WordPress.

### WEB & GRAPHIC DESIGN @ DIGITAL VILLA

Jan 2015 - Present

In 2014 I began freelancing on the side as a graphic designer. To increase revenue, I taught myself to program through online platforms. By 2016 I had web development as my main service, soon after I resigned from my day job and made programming my main career. In the fall of 2017, I enrolled in SAIT's Software Development program to add recognition to my portfolio and continue to thrive in the digital market.

### DIGITAL MARKETING CONSULTANT @ O44 SOCIAL

May 2016 - Jan 2017

A perfect hybrid between my sales background and my digital literacy. I was required to find prospective businesses that needed help with their social media presence and arrange meetings to design a workplan to improve their digital footprint. When I learned how a poorly designed site damages the company's brand, my interest was piqued to pursue web development as a fulltime career.

## EDUCATION

### PROGRAMMING & APP DESIGN @ E-LEARNING

December 2014 - Present

The key in exceling on every team I have been a part of is continued e-learning. In 2014 a lynda.com course ignited my self-taught journey into design and web development. Whenever a client required a specific technology or an innovating feature, sites such as Udemy, Lynda and Smashing Magazine gave me the knowledge to fulfill each project need.

### SOFTWARE DEVELOPMENT @ SAIT

Septemeper 2017 - May 2019

I became a well-known student due to my hard work ethic and outstanding assignments. I was honored to be asked for my consent in allowing SAIT to display my Battleship code to future students. I also formed part of the peer-to-peer mentorship program to aid new students in achieving excellency in their careers.

### ORGANIZATIONAL PSYCHOLOGY @ UAEH

August 2007 - December 2011

I had the opportunity to learn proven techniques that boost productivity and performance in renown companies. I have used analytics and statistics to validate the worth of a company's workforce while learning about the power of advertisement for the business world and studied methods and practices to predict and correct social behavior.
